C. Curricular Development Activity

Courses expanded and enhanced

Occupational Biomechanics, IE 571, 3 credits, - (Expanded the course materials in 2012, greatly redeveloped this course to include more medical applications, and direct system/tool design in 2014, In December of 2016 the course was expanded to include 3 new lectures/labs that are focused on practical lab skills and equipment training)

Human Factors, IE 577, 3 credits, - (Fully developed and revitalized the course in 2008, updated for 2009, 2010, 2011, 2012, 2013, 2014, 2015 and 2016)

Research Practicum in Ergonomics, IE 671X, 3 credits, (oversaw and developed four large scale human performance experiments to teach students research steps and execution, in 2016 this course was restructures to increase team effectiveness and streamline the research process)

Applied Ergonomics and Work Design, IE 271, 3 credits, (updated materials and added three weeks of new material to support current standards in industrial practice)

Spaceflight Operations Training Course, AERO X, 3* credits, (this class was founded in the summer of 2014 by Clayton Anderson and Tor Finseth, I was involved as one of the founding faculty and I developed materials and lectured in areas having to do with you capabilities, training and team structures, I have been asked to (and have accepted) participate again this year in the second running of this special and very innovative academic experience).

Courses proposed, created and taught

Cognitive Engineering, IE/HCI 681X, 3 credits, (created and developed) expect full capacity of 12 students, (in addition I add a distance section to accommodate multiple requests), 0 TA

Human Factors in Design, IE 576, 3 credits, (redeveloped and created with M Dorneich), 0 TA

Courses Currently in development for Fall of 2017

Augmentation Engineering IE 677, this course is an innovative approach to preparing human workers for various environmental (physical and social) and technological (HRI, Exoskeleton, EVO suite, Hazmat technology) challenges that are present in many modern jobs. This is a very lab intensive course that will enable students to optimize work in a way beyond that of classical work redesign and tools assignments interventions.
